# We should care about gravitational wave source properties

Abbott+ 2016, arXiv:1602.03837,  
arXiv:1602.03840

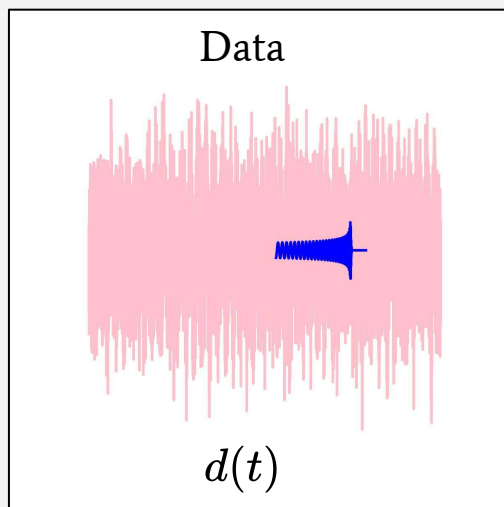

Understand **physics and astrophysics** of massive stars and compact stars

Perform **tests of general relativity**

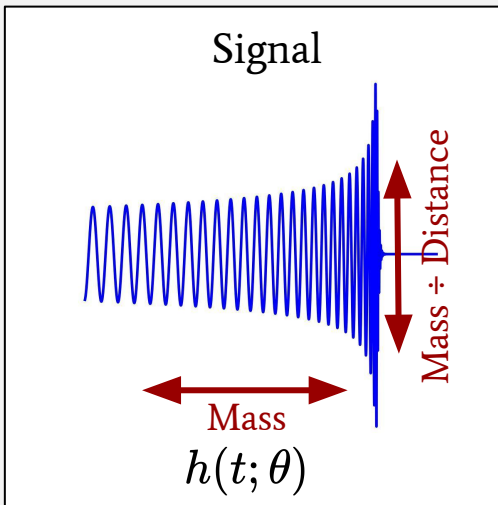

Measure the **expansion rate** of the Universe

...and much more!

# Ingredients of GW source property inference

=

Predicted by general relativity

+

Calculated from stretches with  
no signals

$$p(\theta|d) = \frac{p(d|\theta)p(\theta)}{Z}$$

Typically work with the Fourier transform of these quantities

**Bilby**—solving all your  
gravitational-wave inference needs and  
then some!
